

They get in. They get out. Fast.

Hackers are swift because they do their research. They look for vulnerabilities and available information to find the best way to access your network.

Malicious drive-bys can come in the form of unsecured connections, weak credentials, or human error.

Protect your systems from being jacked.

The Quick & the Curious

Take your time.

Double-check all details before
you transmit sensitive information.

You may accidentally send
private data to the
wrong person.

Check Updates.

Don't wait for final reminders to update
your software or operating system.

Hackers take advantage of
vulnerabilities that patches can fix.

Being current is
good insurance.
